

A Selection-leakage reference (wheat)

real feature geometry + injected known-truth leakage

Type E (selection leakage)

status: present

C–B clears calibrated floor (floor95 = 0.234)

held-out FPR = 0.08 (nominal 0.05)

detection power = 0.88 at L = 1,000

Null-validity

status: measurable

(group structure is estimable)

Evidence gate:

supported: a selection-leakage statement

unsupported: a clean-benchmark statement

B Drug scaffold reference (boundary case)

Bemis–Murcko scaffold grouping is singleton-dominated

Null-validity

status: not measurable

only one group reaches the minimum size

→ a structure-aware null is not estimable

reported as not measurable, not as clean

Type E (selection leakage)

status: absent

(no leakage signal detected)

Clean verdict:

withheld — benchmark not certified clean

C Operating-characteristic read-out

an operating-characteristic read-out,
not a binary clean/leaky verdict

no judgment on any real published benchmark

Read-outs on controlled certified references of known truth; no claim is made that any specific published benchmark is wrong.
